Findings:

There were 43,490 Student Credit Hours (SCHs) produced in fall 2008 (Table 1). Of these, 77.5% were produced by USFSP students and 22.5% were produced by USF students whose home campus was Sarasota, Lakeland or Tampa (Table 1A). In spring 2009, SCH production was 41,598 (Table 2). Of these 76.4% were produced by USFSP students and 23.6% were produced by USF students from other home campuses (Table 2A).

Course-level Reports:

The Induced Workload Matrix summarizes SCHs produced by Majors (College) in each course. This allows for the identification of service courses as well as the proportional distribution in SCHs produced by USFSP and USF System students in USFSP courses. Comprehensive course-level data are reported separately.

Methodology:

The Induced Workload Matrix originates with student-level files that contain multiple records which correspond to course enrollments. Associated with each record is information about the student's home campus as well as their major. Majors are categorized by college and SCHs are calculated by multiplying enrollments by course credit hours. Analysis is conducted using a series of Excel pivot tables.

Notes:

Student Level: LD = Lower-division, UD = Upper-division, PB = Post-baccalaureate, GRD = Graduate, ND=Non-degree.

USFSP = Students with USFSP Home Campus, USF = Students from Lakeland, Sarasota or Tampa.

SCH = Enrollments * Course credit hours.

College Totals = Students with majors in each college.

Course Offerings = Course-level data for courses offered by colleges.
